

OVER FASCIA VENTS

PURPOSE: Over Fascia Vents provide discreet eaves ventilation in the roof void. They are lightweight and durable and are easily installed over the fascia in new build or re-roofing applications.

They create ventilation by allowing airflow into the roof space and also stop birds and insects entering the void.

Each 500mm piece has a male and female end which interlock by simply sliding into place. This produces a 1 metre robust structure that will not crush or warp.

QUALITY STANDARDS:

Conforms to BS 5250: For Roof Space Ventilation (Management and Moisture in Buildings).
